

Tread-1 joins InCab U

An accredited online college education program for truck drivers called InCab University (InCab U) has signed an agreement with Instructional Technologies (IT) to offer its Tread-1 computer-based driver training as part of the InCab U's curriculum.

Tread-1 is an interactive training system providing a variety of courses designed for truck drivers in the areas of operations, regulations and safety. IT's secure web-based database documents and stores all Tread-1 driver training data.

The agreement brings together In-

Cab U's academic curriculum with Tread-1's safety courses, allowing fleets to train drivers without having to route them back to a home terminal, says Craig Fuller, CEO of InCab University.

"This type of access to driver and safety training and now education is becoming increasingly important," he said. "Tread-1 is the industry leader in interactive driver training and in conjunction with InCab U's program of study, this agreement will allow all students to complete training on their own time from the ease of their truck."

**TRUST A CUMMINS APU
FOR EVERY COMFORT.**

Cummins ComfortGuard™ APU system.

The most trusted name in heavy-duty engine performance now powers every comfort with an APU system. The ComfortGuard APU system quietly powers your truck's cab and hotel loads, provides total heating and air conditioning, and keeps batteries and the main engine road-ready. ComfortGuard lets you stop idling, reduce noise and emissions, and cut fuel use by up to 80% compared to idling. Service and support from the Cummins nationwide network are unmatched in the industry. At Cummins, when we say "every comfort," we mean it.

ALK's FleetCenter

CoPilot FleetCenter is a low-cost fleet management solution from ALK Technologies that offers tracking, two-way messaging and access to ALK's location based services, including real-time traffic and points of interests.

Designed to work seamlessly with CoPilot Truck and CoPilot Live GPS navigation solutions, FleetCenter is a web-based fleet management solution connected to wireless-enabled mobile devices—such as pocket PCs, smartphones, laptops or on-board computers—running Windows Mobile 5.0 or Windows XP operating systems. These devices provide spoken directions using CoPilot Truck or CoPilot Live Professional and communicate their exact position in real-time to FleetCenter.
