Carrier Logistics to Offer

PC*MILER Routing and Mileage System Online *ALK Technologies' Premier System Now Available Through CLI's Web-Based Logistics Services*

Tarrytown, N.Y. – September 5, 2008 – Carrier Logistics Inc. (CLI), the transportation systems consultant and software developer, will offer PC*MILER, the industry's leading routing, mileage and mapping system, to its web-based customers for the first time.

Until now, PC*MILER was available only to customers of CLI's installed software system, FACTS. It will now be available to customers using the Internet-based service, FACTS-ondemand. CLI customers who select PC*MILER Web Services will be able to add functionality such as truck-specific street-level directions and toll costs on an à la carte basis. Used by more than 22,000 leading motor carriers, shippers and logistics companies around the world, PC*MILER is the industry's most current and accurate routing, mileage and mapping software solution.

“We're thrilled to be strengthening our relationship with ALK Technologies through PC*MILER Web Services and giving our customers all the added functionality that will make their processes more efficient allowing them to save money on fuel for example,” said Ken Weinberg, vice president of Carrier Logistics.

“We are delighted to announce our expanded relationship with CLI, as this enables us to serve traditional and emerging transportation and logistics segments, at a time when optimizing ROI is more critical than ever for our clients,” commented Roy Schijns, vice

president, sales for PC*MILER Solutions at ALK Technologies. “It also fits quite well within our go-to-market strategy, which involves leveraging the right partnerships and alliances while evolving our software delivery model to a hybrid between server-based installations and SaaS web services.”

PC*MILER Web Services is a hardware and software agnostic interface to PC*MILER providing the ability to access the functionality associated with the core product, thus making it easier to share data and improve efficiency. It offers a standardized way of integrating Web-based applications using XML (Extensible Markup Language) and SOAP (Simple Object Access Protocol) over an Internet Protocol Backbone, all developed in Microsoft.NET.

The ongoing partnership means less-than-truckload (LTL) carriers, CLI’s primary customer base, have easy access to the leading routing and mileage system. Developed more than 22 years ago, PC*MILER is used by truckload, LTL and private fleets. It’s used by 96 percent of the top 100 motor carriers and the U.S. Department of Defense, GSA and FMCSA rely on PC*MILER as their distance standard.
